SUMMARY

Web3 full-stack engineer with proven production impact at Uniswap, MetaMask, and Morpho – driving millions in profit.

EXPERIENCE

Morpho

January 2026 – September 2026

Software Engineer (Curator) | *Next.js + TS, GQL, REST, SQL, Biome*

NYC (hybrid)

- Built and owned vault creation wizards (vaults, fee wrappers), cutting vault deployment time from days to minutes
- Delivered vault transaction history and Public Allocator V2 across 20+ PRs and 2 codebases in 5 days using detailed technical specs and parallel agentic workflows
- Expanded support for dozens of wallets by aligning the team and improving core transaction logic (wallet batching; adding transaction callbacks)
- Unblocked dozens of Morpho curators and aligned protocol+app launch timelines, using novel solutions (e.g., deploying pre-audit contracts on a local server, mocking RPC-interaction primitives, bespoke user interfaces)

Uniswap

August 2024 – November 2025

Software Engineer (Swap) | *Next.js + TS, Bun, Vite, Biome*

July 2025 – November 2025 | NYC (hybrid)

- Cut Unichain swap time from 2s to 0.2s by fetching receipts with flashblock-aware RPCs then parsing event logs to get the final swap amount
- Reduced friction on 500k+ swaps with preselect token buttons
- Unblocked urgent Solana release for Swap through rapid code+design cycles, ensuring SPL 2022 token support, and improved feature gating

Software Engineer (Wallet) | *React Native + TS, Tamagui, Redux Saga, ESLint*

August 2024 – July 2025 | Fully Remote

- Enabled 150k+ wallet testnet sessions, implementing it over 4 days to make our Unichain Sepolia GTM launch
- Drove 100k+ Uniswap smart wallet delegations via throttled, action-prompted nudges, a sleek management screen, and JIT delegation checks
- Allowed 10k+ wallet users to interact with the Monad Testnet by implementing the network in direct collaboration with their team
- Prevented recurring production runtime crashes with custom lint rule support + guidelines

MetaMask

May 2022 – August 2024

Full Stack Engineer | *Node/Express, Solidity, React + TS, Redux, Vite, SCSS, Go*

August 2023 – August 2024 | Fully Remote

- Achieved a \$10M+ annualized run rate for MetaMask Bridges with only 2 other developers (see: Dune)
- Led the overhaul + integration of swaps (see: PR) for a send flow accounting for 10M+ transactions/month
- Reduced overhead by \$40K+/month by executing a multi-phased migration from an external transaction simulation provider to an in-house offering
- Doubled mobile revenue share by implementing and optimizing a conversion flow from MetaMask Mobile with performance optimizations, auto-scrolling, and native-like web components

Frontend Engineer | *React + TS, Redux, Jest, Ethers, Tailwind, MixPanel*

May 2022 – August 2023 | Fully Remote

- Developed the MetaMask Bridges UI using React, TypeScript, and Redux to enable the seamless transfer of tokens across 9 EVM-compatible blockchains
- Drove \$1B+ in volume and \$9.5M+ in fees (see: Dune, Arkham) since launching in November 2022
- Led optimization initiatives by incorporating navigational lazy loading, JS thread yielding and lint-enforced tree shaking, resulting in a 25% decrease in FCP time and eradication of all 22 long tasks in a core flow

Buzz Crypto

March 2021 – April 2022

Frontend Engineer / Founder | *React Native, JavaScript, Expo*

Sterling, VA

- Created a group crypto trading app UI using React Native
- Implemented a lightweight touch-to-data mapping function which cut down touch latency for a feature by 90%

Coder Kids Inc

August 2019 – March 2021

Computer Science Teacher | *HTML, CSS, JS*

McLean, VA

- Taught 100+ classes on the basics of web development to groups of 15+ K-8 students

TECHNICAL SKILLS

Languages: TypeScript, Solidity, HTML, CSS, JS, Go

Frameworks: Next.js React Native, React, Node, Jest, Playwright, Maestro, SCSS

Libraries: Redux, Ethers, Express, Tamagui, Tailwind, Wagmi

Agents: Claude Code, Devin, OpenCode (GPT), Playwright MCP, Context7, Linear MCP, Better Stack MCP
