Bilal Zahory

bzahory@gmail.com | linkedin.com/in/bzah | github.com/bzahory | bzah.bz | New York, NY

Summary

Senior software engineer (React, Next.js, TypeScript) who ships consumer products fast: built the MetaMask Bridges UI ($48.6B volume, $424M fees) and cut trade confirmation time 10x at Uniswap.

Experience

Morpho January 2026 – September 2026

Senior Software Engineer (Asset Manager Tools) | Next.js, TypeScript, GraphQL, REST, SQL *New York, NY (hybrid)*

- Built and owned vault creation wizards, cutting lending product deployment from days to minutes
- Shipped transaction history and on-demand liquidity reallocation in 5 days (20+ PRs, 2 repos) via specs and parallel agents
- Expanded support to dozens of wallets by reworking core transaction logic (batching, callbacks)
- Unblocked dozens of asset managers with local pre-audit contract deploys and mocked node APIs, keeping launches aligned

Uniswap August 2024 – November 2025

Software Engineer (Swap) | Next.js, TypeScript, Bun, Vite *July 2025 – November 2025 | New York, NY (hybrid)*

- Cut trade confirmation on Uniswap's new network from 2s to 0.2s using streamed pre-confirmations and event log parsing
- Drove 1.5M+ swaps through A/B-tested preselect token buttons that removed a step from the trade flow
- Shipped an urgent Solana launch in rapid code and design cycles, with new token standard support and feature gating

Software Engineer (Wallet) | React Native, TypeScript, Tamagui, Redux Saga *August 2024 – July 2025 | Remote*

- Drove 100k+ smart wallet upgrades with A/B-tested in-context prompts, a management screen, and eligibility checks
- Enabled 250k+ wallet sessions by shipping the test launch of Uniswap's new network in 4 days
- Prevented recurring production crashes with custom lint rules and team guidelines

MetaMask May 2022 – August 2024

Full Stack Engineer | Node, Express, React, TypeScript, Redux, Go, Solidity *August 2023 – August 2024 | Remote*

- Led the overhaul and swaps integration of a send flow handling 10M+ transactions per month
- Cut vendor costs by $40K+ per month by migrating transaction simulation from an external provider to an in-house service
- Doubled mobile revenue share with a faster MetaMask Mobile conversion flow (auto-scrolling, native-like web components)

Frontend Engineer | React, TypeScript, Redux, Jest, Tailwind *May 2022 – August 2023 | Remote*

- Built the UI for Bridges, MetaMask's cross-chain transfer product, with 2 other engineers; it processed $48.6B in volume and $424M in fees across 100M+ transactions for 1.5M+ users through its November 2025 sunset
- Built the Bridges Mixpanel conversion funnel, A/B tests, and in-app surveys; used the funnel to target performance work
- Cut FCP 25% and removed all 22 long tasks in a core flow via lazy loading, main-thread yielding, and tree shaking

Buzz Crypto March 2021 – April 2022

Founder and Frontend Engineer | React Native, JavaScript, Expo *Sterling, VA*

- Built a group trading app in React Native, cutting touch latency 90% with a lightweight touch-to-data mapping function

Coder Kids Inc August 2019 – March 2021

Computer Science Teacher | HTML, CSS, JavaScript *McLean, VA*

- Taught 100+ web development classes to groups of 15+ K-8 students

Projects

Chat App with Forks | *Next.js 16, TypeScript, Anthropic SDK, SQLite, Drizzle, Tailwind, Playwright* October 2026

chat.buzzandspark.com | github.com/buzzandspark/chat-app

- Built a streaming chat app where a background Haiku agent turns options into prompts; one click forks up to 10 chats
- Cut costs with prompt caching (about 90% off forked chats) and a background agent costing a fraction of a cent per run
- 204 kB gzipped first load (about 0.33s unthrottled) and 100/100 in all four Lighthouse categories, desktop and mobile
- Handled dropped streams, mid-stream errors, model fallbacks, and safety refusals; the background agent never blocks chat

Real-Time Order Book | *Next.js 16, React 19, TypeScript, zustand, WebSockets, Vitest, Playwright* October 2026

hyperliquid-widget.vercel.app | github.com/BZahory/hyperliquid-widget

- Built in about 7 hours with coding agents under my written rules: stream state outside React, minimal effects, strict types
- Held React to one render per frame by buffering WebSocket data outside React; 0 layout shift and no tasks over 50 ms
- 141 kB gzipped first load and 100/100 in all four Lighthouse categories on desktop and mobile

Technical Skills

Languages: TypeScript, JavaScript, HTML, CSS, Go, Solidity
Frontend: React, Next.js, React Native, Redux, zustand, Tailwind, Tamagui
Backend and Data: Node, Express, SQL, SQLite, Drizzle, GraphQL, REST, WebSockets
AI: Anthropic SDK, streaming, prompt caching, background agents, model fallbacks, Claude Code, Devin
Testing and Product: Jest, Vitest, Playwright, Maestro, Mixpanel, A/B testing, funnel analysis
